DETAILED ACTION

Allowable Subject Matter

1. Claims 2,4,8-11 and 15-53 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 6 rejected under 35 U.S.C. 103(a) as being unpatentable over Hibino et al. (6,529,251) in view of Shimada et al. (6,448,578)

Regarding Claim 6, Hibino et al. disclose a liquid crystal display device and method of manufacturing the same where in Fig. 4, a three layer gate electrode structure with a top layer 15 or TiN, a middle layer 14 of Al and a lower layer 13 of Ti. Hibino et al. fail to disclose the required nitrogen concentration in TiN layer and the required scan line connection to the gate electrode. However, Shimada et al. disclose a thin-film transistor and liquid crystal display device where in column 1 the required relationship between the scanning line and the gate electrode is disclosed. Furthermore, in column 7, the required nitrogen concentration is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required scanning line and gate electrode connection and the required nitrogen concentration in the TiN layer in Hibino et al. as

taught by Shimada et al. in order to have a semiconductor device with less film peeling problem during manufacture of thin film transistor.
